Landscape strategies to adapt to climate change

How can landscape architects respond to the challenges of a changing climate? This workshop concentrates on the urban environment, especially the increasing density of our cities resulting in less open space or green space, which directly impacts on the city's environment, micro climate and ecosystems. The relatively rapid changes in global climate now taking place will exacerbate these impacts, however, there are measures we can employ to adapt to and mitigate the changing climate and to develop a resilient city environment.

Graeme Hopkins

Thank you to our State Partners for their valuable support

Vision Statement: Resilient, engaging and healthy urban, regional and rural environments, designed in balance with natural and cultural systems.

Mission Statement: To advance the profession of Landscape Architecture in the service of the public interest and to provide leadership in the creation and stewardship of sustainable cities and settlements.
