

AILA CULTIVATE PRESENTS: TOUR WITH AUSTRALIAN ECOSYSTEMS

EVENT 04

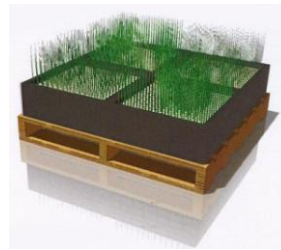

Please join us for a tour with *Australian Ecosystems (AE)* to inspect the largest indigenous nursery in Victoria, and for a demonstration of the recently launched Biofilta system, designed for capture, treatment and reuse of stormwater.

NURSERY

Australian Ecosystems is an environmental restoration and ecological consultancy company protecting and enhancing biodiversity in Australia. AE collects seed, propagates, plants and maintains over 3 million locally indigenous plants per annum on land ecological restoration projects around Victoria. www.australianecosystems.com.au

BIOFILTA PRODUCT

Australian Ecosystems and engineering company *Cardno* have combined engineering and horticultural expertise to develop a new modular bioretention system. The Biofilta system captures, treats and reuses stormwater in a spatially efficient manner, and overcomes many of the problems that traditional bioretention systems have encountered in greenfield and urban retrofit situations. Biofilta systems recently received strong recognition through winning the Stormwater Industry Association of Victoria award for Excellence in Research and Innovation. www.biofilta.com

Wednesday November 17th
