

TURN YOUR CAR PARK INTO A SPONGE!

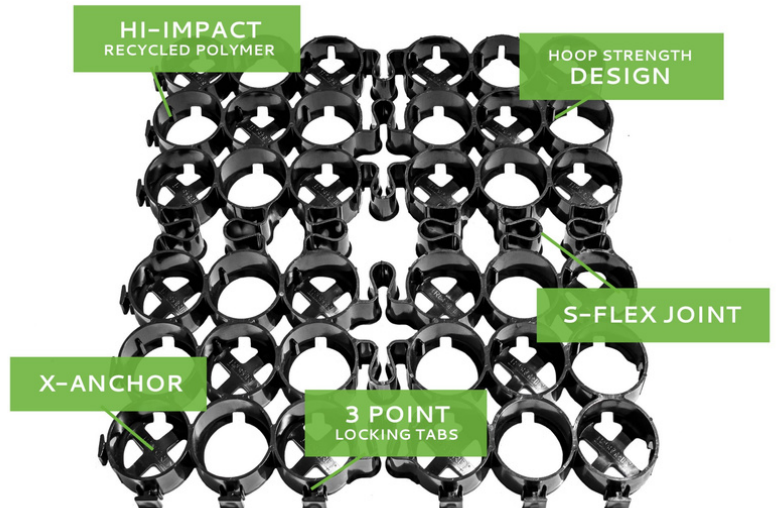

TRUEGRID® DRIVE ON SURFACE

TRUEGRID provides a highly permeable stabilised surface that can be used for the movement and parking of vehicles.

Compared to concrete and asphalt pavement, the TRUEGRID system is designed to infiltrate storm water runoff instead of shedding it off the surface.

TRUEGRID reduces the amount of runoff by allowing water to pass through surfaces that would otherwise be impervious.

Runoff is stored in the stone aggregate sub base layer, and allowed to infiltrate into the surrounding soil (functioning like an infiltration basin).

LOW IMPACT ENVIRONMENTALLY SUSTAINABLE DEVELOPMENT

Manage increased Rainfall Volume
and Reduce Flows

Capture/ Detain / Retain
Stormwater

Reduce the Effect of Pollutants for
a Cleaner Environment

TREE PROTECTION ZONE CAR PARK!

PAVE THE WAY TO A MORE SUSTAINABLE FUTURE

100% Post Industrial HDPE Pipe from mining, irrigation & civil

TRUEGRID is a 100% Recycled material, and a 100% Recyclable.

Injection moulded under ISO 9001

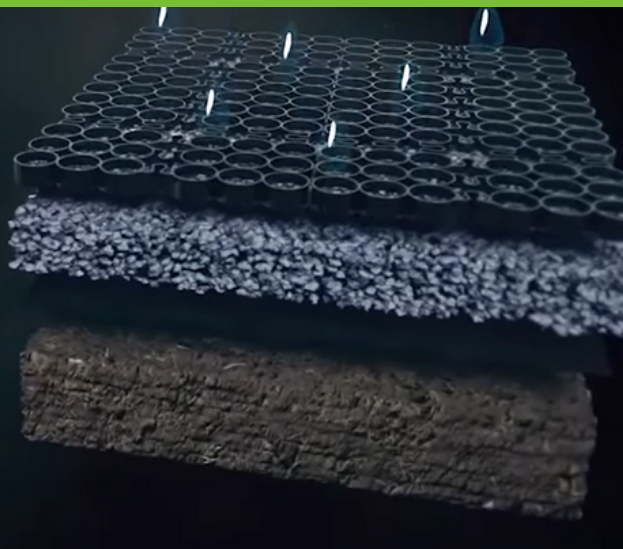

100% Permeable Fully Engineered Drive on Surface.

USE TRUEGRID PRODUCTS TO GENERATE COMPLIANT WSUD REPORTS & MUSIC MODELS
